Conventions and abbreviations

Conventions

Hyphens indicate a prefix or suffix and the sign < > an infix, while the equal sign indicates a clitic, e.g., =*pa* ‘still, yet’.

Boldface indicates a grammatical morpheme under discussion in an example, or an anticipated segment missing in the original text.

Capitalization in glossing indicate a morpheme with an unknown function or one which would require too much space to gloss it. Small cap letters indicate grammatical function, as in given in abbreviations below.

Punctuation marks “ ” are used to enclose a direct quotation, and the single marks ‘ ’ for enclosing a quotation within a quotation.

Abbreviations

Nonstandard abbreviations (those not given in the Leipzig Glossing Rules) used:

AV, actor voice

CLCT, collective

COS, change of state

DUR, duration

EXC, exclamation

HUM, human

IMP, imperative

IRR, irrealis

LNK, linker

LOC, location

LV, locative voice

NEUT, neutral

NUM, numeral

ORD, ordinal of a number

PROH, prohibitive

Q, yes-no question marker

RECP, reciprocal

RED, reduplication

REL, relative

said, it is said

sp., species

STA, stative

UV, undergoer voice

Introduction to Kanakanavu

1. General background¹

Kanakanavu is only spoken by very few older speakers in Namasia, Kaohsiung today. In fact, we are now left with the last competent informant, Angai. There were still about 150 speakers in the village of Tanganua 民生村 when Tsuchida (1976:150) first investigated in 1969. Like Saaroa, Kanakanavu is almost being completely replaced by Bunun. Both languages are most critically endangered, left with very few fluent speakers today, as reported by Liu, Chang, and Li (2023). Currently, Kanakanavu is somewhat better studied than Saaroa.

As pointed out by Teng and Zeitoun (2016), a striking feature of Kanakanavu is that it frequently makes use of auxiliaries, and that this phenomenon has repercussions on the clause structure of the language, such as personal pronouns cliticized to auxiliaries rather than to main verbs.

An aim of this volume is to make more Kanakanavu texts available in English than those in Tsuchida (2003), which contains only ten. The texts in this volume were collected by Erin Asai in 1931, Kuang Mei in 1977-78, Paul Li in 1999-2000, and Shigeru Tsuchida in the early 2000s. Most of the texts have not been published except for Asai's, which appeared in Ogawa and Asai (1935: 729-39) in Japanese. The analyses of all these texts were undertaken by Paul Li, and Asai's texts were double-checked with a Kanakanavu speaker (named Pani Cuapuana) word-for-word in 2000. Tsuchida's texts were still in the shape of rough field notes before editing. Hsiu-min Huang edited these first and translated Japanese glosses into Chinese or English, Yi-Chun Chen then did the preliminary text analysis, and Chen and Li then completed the final text analysis. We are not entirely certain about some of the word glosses and free translations in Tsuchida's texts. Amy Ming-luan Chen checked through all the texts, fixed the inconsistencies, and corrected any errors detected in the entire file.

Kanakanavu morphology generally remains unchanged in the past 95 years (1931-2025), but Kanakanavu phonology has undergone some changes, especially the phonetics of vowels. There are also some dialectal differences, e.g., the negator is

¹ This monograph grew out of the research project “study of Formosan Language Materials by Shigeru Tsuchida”, August 2020—December 2023, funded by Chiang Ching-kuo Foundation for International Scholarly Exchange, Taiwan.

pronounced as [kau] in the village of Minquan 民權里, while it is pronounced as [kɔ:] or [kaa] in the village of Takanua 達卡努瓦里. Minquan generally keeps the diphthongs, such as *tia* ‘future’, *ʔaisi* ‘exist’, *puaiʔi* ‘return’, and *umaunupu* ‘submerge’.

2. Literature review

Asai was the very first linguist to investigate Kanakanavu in 1931. He gathered 7 texts and created a sketch of its grammar in 1935 (Ogawa and Asai 1935: 723-739). Then, in the early 1960s, T’ung-ho Tung took his students to study the language. Among them, Yan/Sung (1964, 1966, 1969) published two papers and completed an MA thesis on Kanakanavu word structure. Tsuchida’s study (1976: 25-58) then provided an excellent outline of the grammar. Mei (1982) is an examination of the pronouns and verb inflection in Kanakanavu. Ho (1997) gives a sketch of Kanakanavu grammar in Chinese plus 3 texts. Tsuchida (2003) comprises ten Kanakanavu analyzed texts and his (2008) study outlines the sound changes in Kanakanavu over the past thirty years. Chun-ming Wu (2006) has worked on Kanakanavu, but has not yet published this research. Liu (2014) discusses the neutral and imperfective forms in Kanakanavu, Cheng and Sung (2016) on the expression of modality, and Hsuan-ju Chen (2016) on word prominence. Recent research in the past decade, has produced a PhD dissertation (Wild 2018) on voice and transitivity in Kanakanavu and several MA theses: Chang (2014) on quantifiers, H. Chen (2016) on phonology, Deng (2014) on interrogatives, Lan (2012) on negation, Liu (2014) on the voice system, and Yang (2015) on benefaction and malefaction. Furthermore, Teng and Zeitoun (2016) recently published a journal paper on the noun-verb distinction in Kanakanavu and Saaroa, while Zeitoun and Teng (2016) sought to reassess the position of Kanakanavu and Saaroa based on morphosyntactic evidence, in a great departure from Tsuchida (1976), which is based on lexicostatistic evidence. The most recent three publications in Chinese, which deal with the overall grammatical structures of the language, are the sketch grammar of Sung (2018), Zeitoun and Teng (2022) on word classes and language teaching, and the monograph on complementation written in Chinese by Wu (2024).

3. Linguistic changes in the past few decades

Kanakanavu vowels are difficult to transcribe, especially when the low vowel /a/ is adjacent to the high central vowel /i/, whereby it is phonetically raised, for example in /kaini/[kʌini] ‘to eat’. There may be drastic linguistic changes in a moribund language, as in the case of Kanakanavu. Tsuchida (2008: 138) highlights the divergent transcriptions from different sources, as recorded over time, shown in Table 1:

Table 1. Sound changes in Kanakanavu (adopted from Tsuchida 2008: 138)

	Tsuchida 1969	Szakos 1999	Basic Vocabulary 2007	glosses
1	tarikúuka	tarikuka	tarakuka	‘chicken’
2	tuungiingi	tongingi	tonging	‘rat’
3	kumakain(i)	kumakyn	kumakuun	‘to eat’
4	cáini	cöön	cũun	‘grass’
5	ta’ílimi	ta’yrym	ta’urum	‘black’
6	vuá’ini	vo’ini	vo’in	‘eye’
7	cainána	cenanaisi	cenana	‘year’
8	ma’icúun	mecun, me’ecun	me’ecun	‘heavy’
9	raníngi	ranyng	narung	‘leaf’
10	umávici	mavici	mavici	‘to bring’

As shown in Table 1 above, diphthongs have become monophthongized (*ua* > *o*, *ai* > *e*, *ai* > *ö* or *uu*), and an initial vowel (as in 10) or final echo vowel may have been elided over a span of 30 years (from 1969 to 1999). Notice that different phonetic symbols are used to indicate the same vowel in different sources: The high central vowel is indicated by *i* by Tsuchida, *y* by Szakos and by *u* in Basic vocabulary.

4. Phonology

Kanakanavu has the following 12 consonants /p, t, c, k, ʔ, v, s, m, n, ŋ, l, r/, in which /c/ is a voiceless alveolar affricate [ts] and /l/ is a flap and /r/ a trill, a distinction which was kept by the older speakers, such as Mu’u and his wife Paice, but not by the younger speakers, such as Angai. Both /c/ and /s/ are phonetically palatalized before /i/. In addition, /h/ occurs only in loanwords and interjections, e.g., /haia/ ‘taxi’ (loan from Japanese) and /hau/ ‘interjection to make a carabao move’ (Tsuchida 1976: 27-28).

Kanakanavu has 4 main vowels /i, u, ə, a/, while /e/ and /o/ were previously attested in the 1970s to occur only in loanwords and interjections (Tsuchida 1976: 28-29). However, these two mid-vowels now occur much more frequently due to

monophthongization in the speech of Kanakanavu speakers, and so there are phonetic variants of *ai* ~ *e* (or *ia* ~ *e*) and *au* ~ *o*.

There are complex morphophonemic alternations in Kanakanavu, e.g., *saruanai* ‘man’ and *sahuanal-aku* ‘my husband’; see Tsuchida (1976: 32-35) for details.

All lexical forms end with open syllables except nasals, which may or may not be followed by an echo vowel, e.g., *kumakain(i)* ‘to eat’. According to Tsuchida, the penultimate syllable is phonetically long in a disyllabic lexical item, e.g., *cuuma* ‘father’.

Stress is phonemic in Kanakanavu. However, only Tsuchida consistently marked this information in his data, while the other researchers sometimes marked it, but frequently left it out.

5. Morphology

Like the other Formosan languages, there are two productive morphological processes in Kanakanavu, reduplication and affixation.

5.1 Reduplication

There is both full root reduplication, minus any codas and partial reduplication, which includes CV- and Ca- reduplication. Reduplication of a nominal reduplication indicates plurality, e.g., *maanu*² ‘child’ > *ma-manu* ‘children’, *saruanai* ‘man’ > *sa-saruanai* ‘men’, and *vaatu* ‘stone’ > *ra-vatu-vatu-a* ‘ground with many stones’; reduplication of a stative verb indicates intensity or distributive, e.g., *taʔələm* ‘black’ > *ta-ʔələ-ʔələm* ‘all is black’; CV-reduplication of an active verb indicates continuative or repetitive, e.g., *malu-siki* ‘to sweep’ > *malu-si-siki* ‘to keep sweeping’. Ca- reduplication of an active verb root indicates imperfective, as in (1):

- (1) t<um>a-taŋi maanu
 RED<AV>-cry child
 The child is crying.

An active verb may take both partial and full reduplication, e.g., *raʔis-* > *r<um>a-raʔisi* > or *r<um>a-raʔi-raʔisi* ‘to keep biting’, as in (2):

- (2) r<um>a-raʔi-raʔisi tanali maanu.
 RED<AV>-RED-bite peanut child
 The child keeps biting peanuts.

² The minimal free form consists of three syllables (Tsuchida 1976: 31), so the first vowel is phonetically lengthened in a disyllabic form.

Notice that reduplication is restricted to two syllables of a root, as in the other Formosan languages. A full reduplicant contains either CVCV or CVC without the second vowel, e.g., *saviki* ‘betel nut’ > *la-sav-saviki-a* ‘land with many betel nut trees’.

5.2 Affixation

Kanakanavu has numerous prefixes, two productive infixes (<um> and <in>), five suffixes (-a, -an, -au, -ən ~ -in ~ -un, and Ø), and four circumfixes (*ka-...-an*, *ra-...-a*, *ta-...-a*, and *tua-...-a*); see Sung (2018: 25-29). In addition, there are three fossilized infixes, <al>, <ar>, and <an>, as reported by Li and Tsuchida (2009: 352-54).

The Actor-voice marker has five phonologically conditioned allomorphs, *m-*, *ma-*, *mu-*, *um-* ~ *əm-*, and <un> ~ <um> ~ <əm>; *m-* occurs before a vowel, e.g., *m-iima* ‘to drink’; *ma-* occurs more often than not, e.g., *ma-unanə* ‘to stay’; *mu-* occurs on a stem beginning with a labial consonant or *ŋ-*, e.g., *mu-panaʔə* ‘to shoot’ and *mu-a-ŋətənə* ‘to cut with a bolo’; *um-* occurs on a stem beginning with a vowel, e.g., *um-ala* ‘to take’; <un> before a consonant while <um> before a vowel or labial stop, e.g., *t<un>mana* ‘to hear’, *t<um>a-taŋi* ‘is crying’, except after <in>, where <əm> appears, e.g., *c<in-əm>əʔəra* ‘to have seen’ (Tsuchida 1976: 47-48). For example,

- (3) “nuu **mu**-panaʔə=ku ʔinia, lavai ia,
when AV-shoot=1SG.NOM 3.OBL friend TOP
m-usu-tavəɾə=kita=ʔai.”
AV-jump-dive=1INCL.NOM=perhaps
“‘When I shoot (the sun), friend, let’s dive into the water,” (he said).
- (4) si ʔaisi sian *khiojiu*³=maku ʔaisi **um**-ala kaari=mita.
because stay here professor=1SG.GEN PROG AV-take word=1INCL.GEN
Because my professor is recording our words here.
- (5) iimu iikamu ia, t<**um**>imana-a kaari masi-kanakanavu.
so 2PL.NOM TOP listen<AV>-IMP word AV.speak-Kanakanavu
Therefore, you are to listen to words and learn to speak Kanakanavu.

The perfective marker has two allomorphs, *ni-* and <in>, also phonologically conditioned: <in> occurs when the stem-initial consonant is a dental or an alveolar

³ The form *khiojiu* ‘professor’ is a loanword from Japanese *kyouju*.

consonant, e.g., *t<in-əm>uuturu* ‘to have taught’, *c<in-əm>əʔra* ‘to have seen’, and *s<in>avəla* ‘to have lost’, and *ni-* elsewhere, e.g., *ni-mu-ciri* ‘to have stood’ (Tsuchida 1976:54), as in:

- (6) *s<in>uluvai=kiai, ʔakia=cu sua pusiamə.*
 lend<PFV>=3PL.AGT not.have=COS NOM rice
 They lent it to him, yet there was no rice.
- (7) *ni-m-i-kai-naanu sua navuŋu=mu?*
 PFV-AV-I-do-how NOM head=2PL.GEN
 What happened to your heads?

When *<əm>* and *<in>* cooccur, the order is *<in-əm>*, as in the examples in the paragraph above.

6. Syntax

6.1 Case markers

There are two main case markers, *sua~sa* ‘nominative, oblique’ and *na* ‘locative, oblique’, as in (8) and (9), and they are usually optional.

- (8) *masua=cu mipi-ta-pusa-n=ci⁴ s<əm>ərəcə ia,*
 afterwards=COS AV.IPI-ORD-two-ORD=COS check.trap<AV> TOP
u-rucini=cu macuʔa sua tavənəvənə.
 NUM-two=COS branch NOM banana
 The second time they went to check it, there were two bananas.
- (9) *ala ʔinia mia-salai na salai-ini mu-caa*
 take 3PL.OBL put.into-pocket LOC pocket-3.GEN AV-go
ma-avici taanaasa.
 AV-bring home
 They put it into their pocket and brought it home.

The order of nouns is free even without the case markers, as in (10):

- (10) a *r<um>a-raʔisi tanali maanu.*
 RED<AV>-bite peanut child
 The child is biting peanuts.
- b *r<um>a-raʔisi maanu tanali.*
 RED<AV>-bite child peanut
 The child is biting peanuts.

A practical consideration determines which noun serves as the nominative.

⁴ The affixes *ta-.... -(ə)n* or *ka-.... -(ə)n* indicates an ordinal number.

6.2 Personal pronouns

Table 2. Personal pronouns in Kanakanavu (cf. Tsuchida 1976: 38)

	Nominative	Bound						Oblique
		Nominative		Agentive		Genitive		
		I	II	I	II	I	II	
1	íiku íikia	=ku =kía		=aku	=máku	=aku	=máku	ʔikúa
2	íikasu iimukásu	=kásu		=su	=músu	=su	=músu	kasúa
1INCL	íikita	=kíta		=ta	=míta	=ta	=míta	kitána
1EXCL	íikimi íikia	=kími =kía		=mía		=mía		kimía
2PL	íikamu iimukámu	=kámu		=mu		=mu		kamúa
3(PL)	ɣuaini	∅	-ini	=kiái		-ini		ʔinía, ʔisua

There are two sets of free forms, one nominative and the other oblique, and three sets of bound forms: nominative, genitive and agentive. The *m(V)*-forms in Agentive and Genitive Column II are used when the preceding verb ends with a vowel, while the forms without *m-* occur elsewhere (Mei 1982: 210).

A special set of the first-person pronouns, *íikia* and *=kia*, indicates contrastive (Tsuchida 1976: 39), as in (14). These indicate either singular or plural, and there are 98 occurrences of the bound form *=kia* in the texts gathered by Asai, Mei, Li and Tsuchida, while the free form *íikia* appears only five times. The bound form *=kia* was first recorded by Asai, and while one example shows that it refers to ‘1SG’, the others refer to ‘1EXCL’, as noted by Asai (Ogawa and Asai 1935: 728, Footnote 1). This extra set of personal pronouns has diffused to Saaroa respectively as *ilakia* and *=kia*, which appear frequently in Saaroa texts; see Li (2023).

- (11) nuu ʔ<um>ucan-i ia, kaʔan=ku mu-a-caa.
if rain<AV>-NEUT TOP not=1SG.NOM AV-IRR-go
If it rains, I won't go.
- (12) nuu i-vatu-ini ia, tuturu-au=ku.
if I-come-3SG.GEN TOP tell-IMP.UV=1SG.NOM
If he comes, please tell me.
- (13) kau=pa-i i-vatu ŋuain.
NEG=yet-NEUT I-come 3SG.NOM
He has not come yet.
- (14) ma-sarənəpə=kia.
STA-sleepy=1SG.NOM
I'm sleepy (but not anybody else).
- (15) pa-pia-ini ma-manu=musu?
RED-how.many-3PL.NOM RED-child=2SG.GEN
How many children do you have?
- (16) tia=ku ma-livulaʔə kasua.
FUT=1SG.NOM AV-hit 2SG.OBL
I'll hit you.
- (17) pu-aiʔ-a taanaasa ʔakun ki-paapa kimia
get-back-AV.IMP home PROH do-follow 1EXCL.OBL
n<um>a-namarə si ta-tiʔiŋ=pa=kasu
RED<AV>-burn because RED-small=still=2SG.NOM
mata ma-nanakə=kasu.
and STA-female=2SG.NOM
Go home! Don't follow us as we go to burn the bush because you're still too young and you're a girl."

A free nominative pronoun may occur sentence-initially as a topic, without deleting the nominative case marker *sua*, as in (18):

- (18) sua iiku ia, kaʔan=ku pə-rəsəəvə ma-manəŋ.
NOM 1SG TOP NEG=1SG.NOM tell-lie STA-good
As for me, it is best that I should not tell a lie.

6.3 Voice, mood and aspect

Table 3. Voice, mood and aspect in Kanakanavu (cf. Zeitun, Teng and Chen)

			AV	UV
Indicative	Affirmative	Perfective	ni-M-STEM/ <in>M-STEM	ni-STEM/ <in>STEM
		Imperfective	Ca-M-STEM	STEM-ən
		Neutral		STEM-ai
	Negative	Predicative <i>kaʔan</i>	Ca-M-STEM	STEM-ən
		Imperative <i>naumaniʔi</i>		
Non-indicative	Affirmative	Imperative	M-STEM-a	STEM-au
		Directive	M-STEM-an	—
		Dependent	M-STEM	STEM-e
	Negative	Predicative <i>kuu</i>		
		Imperative <i>ʔakuni</i>		

There is a dichotomy between indicative and non-indicative, and affirmative and negative. Affirmative has three different forms: perfective, imperfective, and neutral. There are two main voices: Actor voice, indicated by *m-*, *ma-*, *mu-*, *um-* ~ *əm-*, and <*um*> ~ <*əm*>, *-a* (imperative), and Undergoer voice, indicated by *-ən* ~ *-un* (indicative imperfective), *-au* ~ *-u* (imperative), and *-ai* ~ *-e* (neutral, negative). For Actor voice, see examples (3)–(5) above. For Undergoer voice, as follows:

- (19) puʔa-ən=maku camai iisi.
 buy-UV=1SG.GEN vegetable this
 I'm buying these vegetables.
- (20) a-riucucu-un ciina sua maanu.
 IRR-kiss-UV mother NOM child
 Mother kissed the child.
- (21) paka-naʔul-ai=maku cakəran iisi.
 times-swim-NEUT=1SG.GEN river this
 I swim in this river.

The prefix *ma-* usually indicates stative verbs. However, it may also indicate active verbs in Kanakanavu, e.g., *ma-a-caca* 'laugh', *ma-ka-cəkəna* 'arrive', *ma-kari-kari* 'talk'. It is not clear which active verbs can take the prefix *ma-*.

For Locative voice, as based on Tsuchida (1976):

- (22) ni-pia-pacal-an=aku sua tutui sua ta-u-canum-a.
 PFV-PIA-kill-LV=1SG.GEN OBL pig NOM LOC-draw-water-LOC
 The place of drawing water is where I killed a pig. (Tsuchida 1976: 49)

Zeitoun and Teng (2016) do not believe there is a Locative-voice; it is instead a nominalization, as based on the evidence from the pronominal system.

According to Chun-min Wu (pers. Comm., 2024/12/27),⁵ the AV-UV dichotomy is widely attested in most indicative or non-indicative sentences. But the instrumental/reason applicative *si-/se-/sia-* can be observed only in interrogative sentences (pseudo-cleft wh-sentences) or certain nominalization constructions, as in Table 4. Moreover, the form of UV used in indicative (imperfective/negative) sentences is different from that used in interrogative sentences (pseudo-cleft wh-sentences), as shown in Table 4 and examples (23) and (24). This type of distinction is relevant throughout the voice system.

In Kananavu, voice morphology used in indicative/declarative sentences is different from that used in wh- clauses, which retains more nominalization features (cf. Zeitoun & Teng 2016).

Table 4. Different voice morphology in pseudo-cleft wh-sentences

Sentence type	Actor Voice	Undergoer Voice	Instrumental /reason Appl	Locative Appl
Indicative	M-type	-ən	--	--
Pseudo-cleft /Nominalization	M-type	-a	se-/sia-/si-	--

For example, the Actor voice marker used for both interrogative and indicative clauses is the same, as in (23a) and (24a). However, the undergoer voice marker specified for wh- cleft clauses or nominalization is *-a* (23b) rather than *-ən*, which is used for indicative sentences, as in (24b). The prefixes *se-/sia-/si-* designating instrumental or reason argument are only used in pseudo-cleft wh- sentences as in (23c-d), but do not occur in indicative sentences, as in (24a-b).

⁵ I'm grateful to Chun-min Wu for sharing his interesting observations and examples (23) and (24).

- (23) a. naini sua [k<um>a-kaən uuru]
 who NOM RED<AV>-eat cooked.rice
 ‘Who is eating (cooked rice)?’ (pseudo-cleft)
- b. naini sua [kaən-a/*kaən-ən=musu]
 what NOM eat-NMLZ.UV=2SG.GEN
 ‘What do you eat?!’ (pseudo-cleft)
- c. naini sua [si-pa-ʔucip-in uuru].
 what NOM CV-PA-cook-3.GEN cooked.rice
 ‘What did he use to cook rice?’ (pseudo-cleft)
- d. naini sua [si-ara-kulacə=musu ia].
 what NOM CV-get-angry=2SG.GEN TOP
 ‘What are you angry for!’ (pseudo-cleft)
- (24) a. k<um>a-kaən ʔavia vutukulu iisi
 RED<AV>-eat Avia fish this
 ‘Avia is eating the fish.’ (AV Indicative)
- b. kaən-ən ʔavia vutukulu iisi
 eat-UV Avia fish this
 ‘Avia ate the fish.’ (UV Indicative)

If we treat *-a* and *si-* as nominalizers rather than voice/applicative markers, that is unproblematic and it does not affect the AV-UV analysis. However, in this analysis syntactic agreement is still triggered: *-a* designates a nominative undergoer (23b) and *si-* an instrument/reason (23c-d) in the cleft clause.

6.4 Aspect

There are the following aspect distinctions: neutral, imperfective, imperative, perfective, future, and progressive. The neutral aspect is unmarked and it expresses no specific time, e.g., *mu-caanə* ‘AV-go’ and *um-avici* ‘AV-bring’ (Tsuchida 1976:51). The imperfective marker is Ca-reduplication, e.g., *k<um>a-kili* ‘RED<AV>-tie’ (Tsuchida 1976:52).

The imperative markers are *-a* for Actor voice and *-au* or *-u* for undergoer voice, as in (25) and (26):

- (25) a. c<əm>əʔəra-a ʔikua
 look<AV>-IMP 1SG.OBL
 Look at me!

b cəʔəra-u=ku

look-UV.IMP=1SG.NOM

Look at me!

- (26) a a-pa-kaən-a (*sua) maanu uuru.
 IRR-CAUS-eat-AV.IMP OBL child cooked.rice
 Feed the child with rice!

- b a-pa-kaən-au sua maanu uuru
 IRR-CAUS-eat-UV.IMP NOM child cooked.rice
 Feed the child with rice!

Notice that the Patient in the Actor voice construction may not be marked by the case marker *sua*, as in the Undergoer voice.

As stated and illustrated above (see 5.2 Affixation), the perfective marker has two phonologically-conditioned allomorphs, *ni-* and *<in>*.

Future aspect is indicated by *tia=* or *tee=* before the main verb, as in (16) above and (27)-(28) below.

- (27) tia=ku mu-a-kusa takau
 FUT=1SG.NOM AV-IRR-go.toward place.name
 I'll go to Kaohsiung.

- (28) tia=pa pu-aiʔi nacəŋa si ʔaisi=pa ʔinia
 FUT=still get-back place.name because exist=still 3.OBL
 kaən-a-ini aʔun-ai ʔinia.
 eat-NMLZ-3.GEN carry-NEUT 3.OBL

(People) returned to Nacenga because some food had been left there and they wanted to carry it (on back to the new home).

- (29) sua mia-iisua ʔaisi ava t<um>a-timana nanala ʔusu
 NOM DUR-that exist in.fact RED<AV>-hear orphan name
 tia=nummana sa-saruanai ʔ<um>a-ʔanupu mata n<um>a-namarə.
 FUT=when RED-man RED<AV>-hunt and RED<AV>-burn
 At that time the orphan 'Usu in fact heard when the men would go hunting and burn a bush.

The future marker *tia=* may cooccur with either Actor voice, as in (27), or Undergoer voice, as in (30):

- (30) *tia=maku* *pa-cəpə-cəpəŋ-ən* *iikasu*
 FUT=1SG.GEN PA-RED-think-UV 2SG.NOM
 I'll keep thinking of you.

Progressive is indicated by *ʔaisi* or *ʔeesi*, as in (4) above and (31)-(32) below:

- (31) *ʔaisi=kia* *aaka*.
 PROG=1SG.NOM bad
 I'm feeling bad.

Similarly, the progressive marker may cooccur with either Actor voice or non-Actor voice, as in (32):

- (32) *ʔaisi=maku* *əmən-a* *kaalu* *iisi*.
 PROG=1SG.GEN tie.up-LV wood this
 I am tying up these pieces of wood. (Liu 2014)

In addition, the clitic *=cu* ~ *=ci* indicates change of state, as in (33) and (34):

- (33) *aaka=cu* *cəpəŋ=aku* *kaʔan=ci=kia* *tara-kəna*.
 bad=COS think=1SG.GEN NEG=COS=1SG.NOM look-do.well
 I feel bad that I cannot see very well.
- (34) *maaraŋ=ci=kia*, *kaʔan=ci=kia* *tavalaʔə* *putu-kia-kiau*.
 old=COS=1SG.NOM NEG=COS=1SG.NOM able do-RED-work
 I'm too old to be able to work.

The norm is *=cu*, while *=ci* is due to assimilation to the preceding or following vowel(s). However, this assimilation is only a sporadic change, which may or may not take place, as in (35):

- (35) *nuu* *ni-ari-sina-n=ci* *ia*, *pu-ʔucip-ini=cu* *na* *ʔuia*.
 when PFV-ARI-wash-LV=COS TOP do-cook-3.GEN=COS LOC iron.pot
 When it has been washed, we cook it in an iron pot.

6.5 Negation

Kanakanavu has the following negative markers: *kau~kuu~koo* ‘not’⁶, *kaʔan~kaʔaŋ~ʔan* ‘not (want)’, *ʔakia* ‘not have’, and *ʔakuni~ʔakun* ‘don’t’. The first two are the most productive. There are subtle syntactic and semantic differences between the two; see Sung (2018:100-103) and Zeitoun and Teng (2022:83-86): *kaʔan* may negate a nominal predicate, but not *kuu* or *koo*.

- (36) *kuu=ku m-iima canumu.*

NEG=1SG.NOM AV-drink water

I didn’t drink water.

- (37) *koo=kani paki-sapatə sua vali-ini, panaʔ-ai=kani*
NEG=said PAKI-catch.up NOM friend-3.GEN shoot-UV.NEUT=said

sa caraʔə taniarə, ni-macai ʔinia.

OBL blood sun PFV-AV.die 3.OBL

His friend could not make it, he was shot by the blood of the sun, and he died.

- (38) *kaʔanə taavalaʔə k<um>aənə ʔakia apulu.*

NEG able eat<AV> not.have fire

They could not eat without fire.

- (39) *ʔakuni ma-a-caca ʔikua.*

PROH AV-IRR-laugh 1SG.OBL

Don’t laugh at me!

Compare the following two sentences for a difference between *kuu* and *kaʔan*:

- (40) a *kuu=ku m-iima canumu.*

NEG=1SG.NOM AV-drink water

I didn’t drink water.

- b *kaʔaŋ=ku m-iima canumu*

NEG=1SG.NOM AV-drink water

I won’t drink water.

One primary difference is that while *kuu* negates a factual event in the past, *kaʔan* negates something that may take place in the future.

⁶ The negative form *kau* was recorded in 1931 by Asai, who recorded only the form *kau*, but never *kuu* or *koo* probably in the village of Minquan. It was monophongized as *kuu* or *koo* in the village of Takanua at least half a century ago when Tsuchida first investigated the language in 1968.

7. Acknowledgement

I would like to thank my informants for their kind assistance, hospitality and patience, including: Pani Cuapuana (Neng-xi Tsai 蔡能喜 in Chinese), Mu'u Ka'angena (Kun Wong 翁坤 in Chinese), Paice Kampainaina (Xiu-xiang Fan 范秀香 in Chinese, Mu'u's wife) and Angai Ka'angena (Bo-xue Wong 翁博學 in Chinese). I also want to thank Kuang Mei's informants Apiana Pi'i (K'ung Chiang Ying Hua 孔江櫻花 in Chinese) for providing valuable language data and Chiang-Yue Chang (張江月) for interpreting texts.

The photo on the cover of this monograph is provided by Shou-yan Zhao 趙守彥 from Lugang 鹿港, Changhua, Taiwan.

Kanakanavu Texts

The following Kanakanavu Texts were collected by four linguists at different times. Seven Kanakanavu texts were recorded by Erin Asai in 1931, four texts by Kuang Mei in 1978, eleven texts by Paul Li in 1999-2000 and 2025, and twenty-two texts by Shigeru Tsuchida in 2008-2013. There are at least 162 sentences in Asai's texts, 286 sentences in Mei's, 259 sentences in Li's, and 670 sentences in Tsuchida's, for a total of at least 1,377 sentences.

Similar stories may have been recorded by multiple linguists. For instance, Mei's Text 3, "story of a Kanakanavu girl who was married to a snake" in this volume, is very similar to Tsuchida's (2003) Text 2, "woman who married a hundred-pace snake". We were thus able to correct some typos or errors in Mei's text, as based on Tsuchida's text, whose transcriptions and glosses are more reliable. Not all unpublished Kanakanavu texts available appear in this volume. Chin-chuan Cheng recorded several Kanakanavu texts without glosses or any free translation around 1962. We had difficulty when attempting to work with his texts, so we had to leave them out. Transcriptions of the same lexical items may vary from one investigator to another; we have mostly left them as is, without trying to standardize the forms.

The Kanakanavu texts reflect cultural traditions and beliefs. Similar myths and legends from various ethnic groups may appear in the Formosan natives, such as the big flood, shooting the sun, a human being transforming into an animal, and a girl marrying a snake. Special distinct narratives are also found in these Kanakanavu texts, such as not eating any eel and not crossing over a ditch. Perhaps the most interesting myth relates to the relationship between the rainbow and snake: When it was raining drizzling, a girl tried to catch the rainbow, which turned out to be a snake; see Text 9 collected by Li in this volume. This story confirms at least part of Blust's (2023) hypothesis: from rainbow to serpent.

As in all the other Formosan indigenous groups, Kanakanavu also has legends about the little people, who helped the Kanakanavu people raise crops on farms to assist them in living better; see Text 10 collected by Li in this volume. The little people lived in an underground cave. The legend appears to imply that the little people who resided in Taiwan before the Austronesian-speaking people, were better skilled in agriculture than the latter. There is also a story about a giant, as in Tsou.

The special pronominal form =*kia* ‘1SG/EXCL’ appears only once in all Asai’s texts, 11 times in Mei’s texts, 14 times in Li’s texts, and 72 times in Tsuchida’s texts, a total of 98 occurrences in all the texts collected by the four investigators. There are roughly the same number of occurrences of =*kia* (93) in the Saaroa texts (Li 2024:256) as in the Kanakanavu texts in this volume.

Part One: Texts by Erin Asai

The following texts were originally collected by Asai (Ogawa and Asai 1935: 729-739) in 1931. Li checked them with Pani, a Kanakanavu informant, in 2000.

Text 1. Shooting the sun

panaʔə taniarə

Checked with: Pani, male, Age 69

Date: 2000.06.23/ 07.17

ni-ka-maanəŋ=ku təətan.
PFV-do-well=1SG.NOM pipe
On that day, I went over to the other side (of the river). I was to fix the water pipe first.

⁵² The general form is *vunai* or *vənai* 'snake'. The archaic form is *vaəsə*, as given by older people.

⁵³ The reason for using the expression *niŋai vaəsə* instead of *ni-raʔisi vənai* 'bite snake = bitten by a snake' is because it is a Kanakanavu taboo that when you say it, a snake might actually appear. Both forms *niŋai* and *vaəsə* are obsolete used only by older speakers.
